Who Are We?

We are a team of students with a passion for engineering and problem solving, building a car to compete in the Solar Car Challenge.

Benefits

Sponsoring this effort would result in your logo imprinted onto the merchandise of the team, team materials, team website and solar car.

Contact us for information on sponsorships and other questions about us or our goals.

Why?

Competing in the Solar Car Challenge for the first time comes with the deficit of resources to construct the car. We're the first team in the region; we can only rely upon ourselves and sponsors to assist us further and provide for the construction of the car.

What is the Competition?

The Solar Car Competition is a race designed for high school teams to build, test and race completely solar powered cars. Having multiple variants, we have selected to race in the closed F1 style track. The competition is in July of 2024 in Fort Worth Texas.
