ABOUT US

We're a rookie team competing in the Solar Car Challenge. A race between electric cars powered entirely by solar power. Our team is composed of students from Vista del Lago High, a high school in Folsom, California.

Our team is working on design and modeling our vehicle but also educating our fellow students on topics of engineering and design. We strive to build a strong team of individuals with advanced communication, design and building skills to kick-start this one of kind program at our school.

Our team's goal is to not only prepare a working solar car for the 2024 Solar Car Challenge, but also create a thriving community in the Sacramento Area. To build a successful standing, we plan on educating our peers and future students advancing into our position in topics of sustainability and engineering.

This is our first year as a team and cannot wait for the future!

INCENTIVES

Our ability to compete in only possible from our donors and sponsors. Donations to our club are tax deductible due to our placement in our school.

Sponsors will have their logo printed onto merchandise, the final car and displayed on our website.

We also accept donations, material bound or mentor assistance, to further grow our abilities.
